

### **AMENDMENTS TO THE CLAIMS**

This listing of the claims will replace all prior versions and listing of the claims in this application.

#### **Listing of the Claims:**

1. (Currently amended) A data recording method for an optical disk drive, comprising the steps of:

encoding and recording data blocks, wherein each of the data blocks comprises a main data area and an auxiliary data area;

detecting whether a buffer under run occurs;

stopping a recording operation after at least one main data of the data block currently being recorded has been recorded, if the buffer under run occurs; and

restarting to encode and record from the beginning of the next data block,

wherein the recording stops at the auxiliary data area.

Claims 2-3: (Canceled).

4. (Original) The data recording method for an optical disk drive in accordance with Claim 1, wherein the buffer under run is detected if the number of encoded data blocks is smaller than a threshold value.

5. (Original) The data recording method for an optical disk drive in accordance with Claim 1, wherein the auxiliary data area stores error correction codes of the main data area.

6. (Original) The data recording method for an optical disk drive in accordance with Claim 1, which is applied to a digital video drive (DVD).

Claims 7-11: (Canceled).

12. (Previously presented) A data recording method for an optical disk drive, the method comprising:

encoding and recording data blocks, wherein each of the data blocks comprises a main data area and an auxiliary data area;

detecting whether a buffer under run occurs;

stopping a recording operation after at least one main data of the data block currently being recorded has been recorded, if the buffer under run occurs; and

restarting to encode and record from the beginning of the next data block;

wherein the recording stops at the auxiliary data area;

wherein a part of auxiliary data in the auxiliary data area is not recorded, thereby the data of the data block where the recording stops is discontinuous with that of the next data block.
